

Diversity Jigsaw Activity

Introduction

The Diversity Jigsaw is a tool used to **recognise** the multidimensional nature of individuals' experiences and to **promote inclusivity** in patient engagement. **Recognising** how different aspects of a person's identity, such as race, gender, class, sexual orientation, disability, and more, intersect and interact with the social determinants of health can help us understand individual experiences of care and opportunities to participate in decision-making. We can **promote inclusivity** by questioning whose perspectives are privileged in decision-making and whose are absent; and tailoring meaningful outreach with population groups accordingly.

Activity

Recognise: Consider the context of your patient engagement efforts. Which social identities and social determinants of health are important for you to acknowledge? **Promote inclusivity:** What are the multiple lived/living experiences that you need to engage with? Where do you need to focus your outreach and relationship building?
